Content

What journey leads to beer's creation? We all know, it begins as a kernel in the field, and then it passes through numerous stages of production, until the perfect beer is ready to enjoy. This certificate program „Brauer Cursus Weiherstephan“ offers a comprehensive introduction to all areas of the malting and brewing process.

You will learn each stage of the brewing process from raw material science to the technology of malting and beer production, as well as exploring quality control. Our experienced lecturers combine traditional brewing methods with state-of-the-art technology, and the latest science with practical experience.

The online modules are supplemented by an on-campus program at the Weiherstephan research brewery and an excursion to a number of tradition-rich companies within Bavaria. This allows participants to experience brewing technology in all its facets and to be ideally equipped for tackling future challenges in brewing.

Target Group

People working in the upstream and downstream of the brewing industry, e.g. production, sales or marketing, as well as hobby brewers who would like to expand their knowledge in a scientifically sound way. Ideally, participants come with a degree in a scientific or technical area.

Why this program?

In this program the latest research findings are combined with a history rich in tradition. The “Brauer Cursus Weiherstephan”, specially designed in collaboration with the Department of Brewing and Beverage Technology at the Technical University of Munich, is the first comprehensive certificate program that covers the science and technology of brewing.

TUM has been offering courses, professional training and seminars in brewing and beverage technology at Weiherstephan for more than 150 years – a wealth of experience is incorporated into this program. With its own research brewery, extensive laboratory infrastructure and close cooperation with the State Brewery Weiherstephan, TUM Campus Weiherstephan is ideally placed for combining tradition and modern brewing.

Academic Directors

Prof. Dr.-Ing. Thomas Becker
Chair of Brewing and Beverage Technology, TUM

Dr.-Ing. Martina Gastl
Director Research Center Weiherstephan for Brewing and Food Quality, TUM

Roman Werner M.Sc.
Managing Director TUM Food and Agro Center for Innovation and Technology
